Shufti

Biometrically Enriched eIDV

Trust the Person, Not Just the Data.

The Gold Standard for Digital Trust

Verify. Bind. Protect.

Data can be stolen, and faces can be faked. Advanced biometric liveness is how you tell the difference. Biometrically Enriched eIDV binds the digital identity to the physical human by matching a user's live selfie against the trusted photo returned by an authoritative source, such as a **Government Registry, Bank ID, or eID Wallet.** If a source only provides the official ID image, Shufti leverages its own **Face Verification** engine to perform the biometric match and liveness check, ensuring consistent security across all data types..

Unified Identity Layer, instantly escalate risky users from a passive check to a Biometric Liveness Check to stop fraud, all through a single integration.

## Why Choose Biometrically Enriched eIDV?

Onboard in < 3 Seconds
Keep good users moving with frictionless biometric matching that eliminates manual delays.

Enriched Attribute Verification
Verify Age and Address simultaneously by matching a selfie plus data check across global sources (15+ Age and 5+ Address countries) to ensure the resident is the real ID owner.

Doc-less Identity Proofing
Verify "John is John" using the government's own database image without asking for a plastic ID scan.

Stop Impersonation
Prevent fraudsters from using stolen data (Social Engineering) to open accounts by confirming the person acting is the true owner.

Defeat Ghost Workers
Eliminate account renting in the gig economy by verifying the person driving or delivering matches the registered ID.

Single Platform, Single API
Streamline operations by integrating Passive, Biometrically Enriched, and Active eIDs through one unified connection.
