

eIDV

APAC eIDV Coverage

Secure onboarding across the world's fastest-growing digital economies.

The Unified Identity Layer

Shufti eIDV connects your business to the diverse identity infrastructure of the Asia-Pacific region through a single API. From national digital IDs to robust telco verification, this document details our coverage, allowing you to select the right level of assurance for every market.

Verification Types

We provide three distinct tiers of eIDV for flexible identity verification.

Passive eIDV

Invisible background checks that verify user attributes (Name, DOB, ID Number) against Government, Credit, Telco, and Utility databases. Zero user friction.

Active eIDV

High-assurance verification where users authenticate via a trusted third-party credential (e.g., Singpass, MyInfo, BankID). Sovereign-grade security.

Biometrically Enriched

A hybrid check that matches the user's Live Selfie against the trusted photo on file in the Government database. Defends against stolen IDs.

Attribute Capabilities

Specific user details that can be validated in addition to core identity.

Address Check

Confirms the user's Residential Address to satisfy Proof of Address (PoA) and residency requirements.

Age Check

Confirms the user's Date of Birth (DOB) or age threshold to satisfy Age Assurance mandates.

Age Verification

Proof of Address

Marked sources verify Address or Age in addition to Identity.
