

eIDV FOR HEALTHCARE

# Identity Assurance for Patient Safety

Authenticate Patients, Not Impostors.

With over **93 million** healthcare records exposed in **2023**, providers must verify every patient without blocking access to care. Shufti's eIDV acts as a **Unified Identity Layer**, connecting your platform to hundreds of eIDs, mobile wallets, and biometrically enriched data sources. We ensure patients access care instantly, while medical identity thieves get blocked at the gate.

## Unified Identity Layer

Shufti's eIDV allows you to choose the right verification methods per country, according to your need, whether it's auto-filling a new patient intake form via "Pre-fill" or securing a telemedicine session with a biometric login.

*Shufti eIDV is a unified global digital identity layer that lets you choose the right mix of passive checks, active eIDs, and biometrically enriched sources, while keeping data minimised and fraud under control.*

## The High Stakes of Healthcare Security

The cost of medical fraud is rising. Is your patient data secure?

### Medical Identity Theft

Fraudsters hijack patient identifiers to bill insurers for unauthorized care, costing the industry \$100–170 Billion annually.

### Data Breaches

Hacking-related breaches jumped 239% from 2018 to 2023, making EHR systems a prime target.

### Prescription Fraud

Pharmacy billing schemes cost payers hundreds of millions (e.g. Walgreens' \$106.8M settlement).

### Account Takeovers

Credential stuffing attacks on patient portals surged 12% in 2024, risking unauthorized access to sensitive health data.

### The Cost of Breach

At \$4.88 Million, healthcare has the highest average cost per data breach of any industry. (Source: HIPAA Journal)

## Your Healthcare Identity Shield

Solving Core Patient Challenges.

### Strong Docless Onboarding

Grant patients access to portals without plastic ID scans. Use **Biometrically Enriched eIDV** or **Active eID** to match government databases for instant "Know Your Patient" (KYP) compliance.

### Pre-fill & Zero Typing (Intake Acceleration)

Slash drop-offs during complex digital intake. Pre-fill Services fetch verified Name, Address, and DOB from Telco and Government sources using just a phone number, ensuring error-free data.

### Prescription Security

Prevent unauthorized ordering of controlled substances. Require an **Active eID** or biometric login before unlocking sensitive prescriptions, ensuring the person requesting meds is the verified patient.

### Synthetic Defense

Stop fraudsters creating fake profiles for insurance fraud. Our **"Combo" Check** combines Document Verification with Passive eIDV to cross-reference physical IDs against digital records, blocking 95% of synthetic identities.

## Feature Matrix Your Unified Identity Layer

Module	Core Capability	Healthcare Strategic Edge
Passive eIDV	Attribute-only checks (Name, DOB, Address). Satisfies PoA & Age mandates.	<b>Instant Pre-Screening.</b> Validate patient insurance data against <b>230+ sources</b> instantly.
Doc-less Address & Age	Verified Attributes. Confirm Age and PoA via database checks instead of document uploads.	<b>Zero Friction Compliance.</b> Verify patient address for billing without asking for utility bills.
Active eIDV	Strong authentication via eIDs, wallets, and bank logins (e.g. BankID).	<b>Gold Standard Access.</b> High-assurance login for accessing sensitive EHRs across <b>30 territories</b> .
Biometrically Enriched eIDV	Biometric Matching. Matches live selfies against government database images.	<b>Stop Medical ID Theft.</b> Trust the patient, not just the data, by verifying the person behind the screen.
Pre-fill Services	Data Auto-population. Fetches verified details from Telco/Govt sources.	<b>Zero-Typing Experience.</b> Auto-fill intake forms using just a phone number to reduce waiting room times.
Synthetic Defense	Combo Orchestration. Combines Passive eIDV + Document Verification.	<b>Defeat Insurance Fraud.</b> Cross-reference digital data with physical documents to expose forgeries.

## Performance You Can Bank On

### Verification Speed

**< 3 Seconds**

Faster check-ins; reduced patient no-shows.

### Integration

**50% Faster**

Unified API cuts development overhead vs. multi-vendor stacks.

### Passive Reach

**65+ Territories | 230+ Sources**

Massive reach for patient verification and insurance validation.

### Active Reach

**30 Territories | 45+ Sources**

High-assurance eIDs for secure patient portals.

### Age Coverage

**50+ Territories | 170+ Sources**

Satisfy Age mandates without manual documents.

### Address Coverage

**40+ Territories | 180+ Sources**

Satisfy PoA mandates without manual documents.

## Compliance Crunch

Healthcare providers and telehealth platforms must navigate the requirement of HIPAA in the U.S. Breaches and identity-theft incidents can trigger multi-million-dollar fines, litigation, and irrevocable patient trust erosion.

## Why Shufti eIDV?

### Single Platform, Single API

Merchants can integrate Passive, Biometrically Enriched, and Active eIDs with a single API to streamline operations.

### 2x2 Logic for Extra Security

Cross-reference user data against two independent sources (e.g. Credit Bureau + Mobile Operator) to flag inconsistencies in real time.

### Volume-Aware Economics

Optimize cost by mixing low-cost Passive checks for general intake with Active/Enriched checks for sensitive prescriptions.

### Privacy by Design

You receive only the attributes needed (e.g. "Verified Patient"), while Shufti enforces strict retention and masking.

### Journey Builder Orchestration

Visually build your workflow from Pre-fill intake to Synthetic Defense combos without writing code.
