

Secure eIDV Engineering Trust in Communities

Quick. Friction-free. Fraud-Proof.

Authenticate Authenticity, Not Bots. Shufti's eIDV acts as a **Unified Identity Layer**, connecting your social platform to hundreds of eIDs, mobile wallets, and biometrically enriched data sources. We ensure real people connect instantly, while bots and deepfakes get blocked at the gate.

Unified Identity Layer

Shufti's eIDV allows you to choose the right verification methods per country, according to your need, whether it's an invisible "18+" check for minors or a sovereign biometric login for a "Verified" badge.

Shufti eIDV is a unified global digital identity layer that lets you choose the right mix of passive checks, active eIDs, and biometrically enriched sources, while keeping data minimised and fraud under control.

The High Stakes of Social Trust

The cost of fake engagement is rising. Is your community secure?

Bot Armies (48 Million)

Bots account for ~15% of users on major platforms, driving disinformation and degrading trust.

Deepfake Surge (+1100%)

Over 500,000 deepfake videos were shared in 2023, with projections reaching 8 million by 2025.

Account Takeovers (+160%)

Stolen credentials fueled a massive surge in ATOs across Discord, Roblox, and Facebook in mid-2025.

Fake Influencers

Nearly 50% of influencers have inflated followings, eroding advertiser confidence and ROI.

Your Social Network Shield

Solving Core Community Challenges.

Light-Touch Onboarding

Sign up real users in < 3 seconds while blocking bots. Use **Passive eIDV** to verify identity and age invisibly via Telco and Govt sources, keeping the viral loop alive.

Frictionless Age Assurance

Protect minors without plastic ID scans. **Attribute Verification** checks DOB against authoritative databases instantly, meeting regulatory standards while preserving user privacy by returning only age flags (e.g. "Over 18").

Verified Badges & Influencer Trust

Restore trust in the "Blue Check." Use **Biometrically Enriched eIDV** or **Active eID** to match a live selfie against government data, proving the influencer is the real person behind the profile.

Synthetic Fraud Defense

Stop automated account creation. Our **"Combo" Check** combines Document Verification with Passive eIDV to cross-reference physical IDs against digital records, detecting 95% of synthetic identities before they post.

Feature Matrix Your Unified Identity Layer

Module	Core Capability	Social Strategic Edge
Passive eIDV	Attribute-only checks (Name, DOB, Address). Satisfies PoA & Age mandates.	Light-Touch Onboarding. Verify users and age in < 3s against 230+ sources. Ideal for viral growth.
Doc-less Address & Age	Verified Attributes. Confirm Age via database checks instead of document uploads.	Zero Friction Compliance. Meet Online Safety Acts without asking teenagers to upload IDs.
Active eIDV	Strong authentication via eIDs, wallets, and bank logins (e.g. BankID).	Gold Standard Verification. High-assurance "Verified" status for influencers and public figures across 30 territories.
Biometrically Enriched eIDV	Biometric Matching. Matches live selfies against government database images.	Stop Deepfakes. Trust the user, not just the data, by verifying the person behind the camera.
Pre-fill Services	Data Auto-population. Fetches verified details from Telco/Govt sources.	Zero-Typing Experience. Auto-fill registration forms using just a phone number to slash drop-offs.
Synthetic Defense	Combo Orchestration. Combines Passive eIDV + Document Verification.	Defeat Bot Armies. Cross-reference digital data with physical documents to expose automated attacks.

Performance You Can Bank On

Verification Speed

< 3 Seconds

Instant gratification for customers; higher conversion rates for you.

Integration

50% Faster

Unified API cuts development overhead vs. multi-vendor stacks.

Passive Reach

65+ Territories | 230+ Sources

Massive reach for attribute verification and age gating.

Active Reach

30 Territories | 45+ Sources

High-assurance eIDs for verified badges.

Age Coverage

50+ Territories | 170+ Sources

Satisfy Age mandates without manual documents.

Address Coverage

40+ Territories | 180+ Sources

Satisfy PoA mandates without manual documents.

Compliance Crunch

Social network platforms must comply with the requirement of regulations like Europe's Digital Services Act (DSA) and the U.S. Children's Online Privacy Protection Act (COPPA). These laws require platforms to implement effective measures to ensure content is age-appropriate and to protect minors. Failure to establish these safeguards can lead to major consequences, including heavy fines, content takedown orders, and the loss of advertiser partnerships.

Why Shufti eIDV?

Single Platform, Single API

Merchants can integrate Passive, Biometrically Enriched, and Active eIDs with a single API to streamline operations.

2x2 Logic for Extra Security

Cross-reference user data against two independent sources (e.g. Credit Bureau + Mobile Operator) to flag inconsistencies in real time.

Volume-Aware Economics

Optimize cost by mixing low-cost Passive checks for general users with Active/Enriched checks for verified influencers.

Privacy by Design

You receive only the attributes needed (e.g. "18+ verified"), while Shufti enforces strict retention and masking.

Journey Builder Orchestration

Visually build your workflow from Age Gates to Synthetic Defense combos without writing code.
